APEX INVENTORY

Meeting card inventory management challenges

Apex Inventory Management is a comprehensive system designed to address the challenges financial institutions typically face when managing plastic card stock inventory.

Compliant with EMV and PCI requirements, it provides end-to-end functionality to accurately control card inventory, from purchase to production. Its Tracker module supports the entire dispatch and delivery cycle until the card is safely in the hands of the cardholder. Whatever your CMS system or issuance application, Apex Inventory Management's open platform integrates easily into your environment and is configurable at every level, making inventory management more secure, efficient and cost-effective.

Key Features

- Management of card stocks for centralized or branch issuance
- Comprehensive stock reporting for inventory management
- Management of different card stocks per product type
- Stock status tracking and modification
- Supervisor approval for sensitive processes
- Card vendor configuration
- Plastic card configuration
- Adding stock to inventory
- Delivery and distribution
- Tracking distribution vertically (HQ to branches) and horizontally (across branch network or workstations)
- Audit
- Alerts and Notifications

Empowering Evolution

- End-to-end inventory control facilitates the implementation of flexible operational strategies
- Automated inventory processes reduce costs and increase productivity
- Extensive security features deliver enhanced fraud identification and reduction
- Flexible stock management - at the level of lots or individual cards, by vendor or card type, by branch or individual workstation - accommodates the diverse needs of individual institutions
- Rich reporting provides the ability to query based on a wide range of parameters, enhancing management information and improving business control and oversight
- Adaptable workflow management extends as required across internal and external parties, including card vendors, branches, couriers and bureaus

Technical Essentials

- Service-oriented architecture allows seamless integration into the existing card management and issuance environment
- Use of standard XML protocols and web services achieves programming language independence and platform / vendor neutrality
- Web services and other integration mechanisms provide integration at the business process level, standardizing the flow of information between Apex Inventory Management and the applications it interfaces with
- Flexible inventory process flow can be implemented with vertical and / or horizontal distribution paths to meet the requirements of individual institutions
- Process flows can be extended to integrate with other existing business systems, for example procurement
